DE-19957986 discloses a door for motor vehicles, with an outer door panel and an inner door panel, as defined in the preamble of claim 1. It is normal practice to make car doors in the form of self-supporting shell structures.

Problem addressed

To simplify assembly and increase rigidity.

Solution

The outer door module consists of the outer door panel and a connecting panel, and includes the door hinges. The inner door module consists of the inner door panel and a closing panel, both of which frame the window glass. The inner panel has a peripheral contour to receive the door seal, and the separating line between the inner and outer modules also runs along the plane of the seal.

DE-19957986 also discloses a car door consisting of an outer door panel and an inner door panel. However, the door hinges are mounted on the inner panel, and the window frame is not formed by the inner door panel and closing panel; rather, it is an integral part of the door frame. No details are provided regarding the door seal or plane of separation. The

Dependent claims 2 to 9 define advantageous developments of the car door according to claim 1.

Further observations

- The description is inconsistent with the newly submitted claims.
- DE-19957986 is not cited in the description and there is no discussion of the relevant prior art disclosed therein (PCT Rule 5.1(a)(ii)).
